

Design Checklist:

This checklist will help ensure that you are nailing all of the details from the design given to you, which will result in a more successful and accurate PSD conversion.

Typography

- ☐ Figure out how big the font sizes are for the following:
 - ☐ All heading content (h1, h2, h3 tags etc.)
 - ☐ Paragraph content (p tags)
 - ☐ Other content such as button text, input labels, placeholder text, links, logos

- ☐ Establish consistent spacing for headings and paragraph text through:
 - ☐ Line height
 - ☐ Font weight
 - ☐ Letter spacing (also known as leading)

- ☐ Establish the font types for all of your typographical elements (headings, paragraphs, button text, labels etc...)

Colours

- ☐ Gather all of the colours in either hex, rgb, rgba values from the design (include these colours as comments in your css or create variables if you are using Sass)

Measurements of Components and Dimensions

- ☐ Get the measurement of the width of the main content, also considered the “wrapper” and make that your max-width.

- ☐ Take measurement of padding and margins between elements such as:
 - ☐ Padding for buttons
 - ☐ Padding inside of form elements like inputs, textareas etc.
 - ☐ Vertical and horizontal margins between blocks such as sections, images

- ☐ Ensure consistent dimensions for containing elements by taking measurements
